13. Case Study – 1

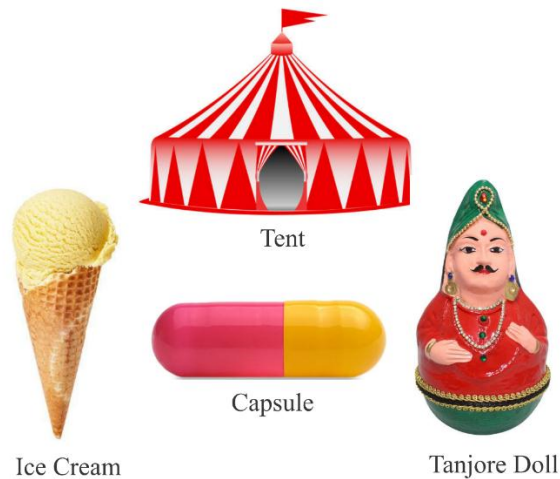

The **line of sight** is the line drawn from the eye of an observer to the point in the object viewed by the observer.

The **angle of elevation** of the point viewed is the angle formed by the line of sight with the horizontal when the point being viewed is above the horizontal level, i.e., the case when we raise our head to look at the object.

- Refer the given figure. If you want to find the height of the tower without measuring it, what information do you need? Justify your answer.

An ice cream is a combination of a cone and a hemi-sphere, the capsule is a combination of cylinder with hemispherical ends. A tent is a combination of a cylinder and a cone.

The center height (total height) of the tent is 15 m and the base diameter is 24 m. The height of the cylindrical base is 10 m.

- Find the area of tarpaulin cloth required to make this tent. (use $\pi = 3.14$)
- Calculate the cost of cloth at ₹ 50 per square meter.

حاصل کرنے سے ہے۔ حاصل کی ہوئی واقفیت یا علم پر عمل کرنے کا نام تربیت ہے۔ "تعلیم ایک دولت ہے تو تربیت اس کا صحیح استعمال"۔ تعلیم و تربیت کا ایک دوسرے سے گہرا تعلق ہے۔ تعلیم کے بغیر اچھی تربیت ممکن نہیں اور تربیت کے بغیر تعلیم بے کار ہے۔ یعنی تعلیم و تربیت کا چولی دامن کا ساتھ ہے۔ اس میں شک نہیں کہ علم دنیا میں ایک بڑی نعمت ہے۔ یہ ایسی لازوال دولت ہے جو زندگی کی آخری سانس تک انسان کے ساتھ رہتی ہے۔ ہر شخص کا فرض ہے کہ وہ اپنی اولاد کو بہترین تعلیم دے اور اس کے ساتھ ساتھ اس کی اچھی تربیت کا بھی خیال رکھے، کیونکہ بچوں کی تعلیم و تربیت کی بنیاد ان کے والدین کے ہاتھوں میں رکھی جاتی ہے۔"

INTERNATIONAL INDIAN SCHOOL JEDDAH
PRE-TERM II EXAMINATION, 2021-2022
ENGLISH – Language and Literature (184)
CLASS-X

Time allowed: 2 Hrs.

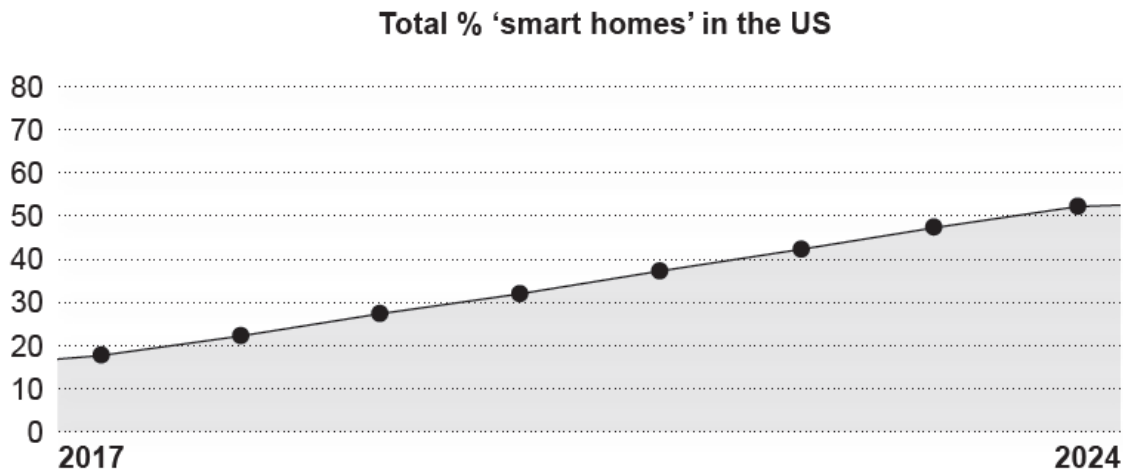

Maximum Marks: 40

General Instructions:

1. The Question Paper contains THREE sections-
READING, WRITING & GRAMMAR and LITERATURE.
2. Attempt questions based on specific instructions for each part.

Q. No.	SECTION A- READING (10 marks)	Marks
1	<p>Read the passage given below.</p> <p>1. Why does a person become overconfident? The reason lies in over assessment of his capabilities. Sometimes people over assess their competence and jump into situations that are beyond their control. Napoleon Bonaparte who became Emperor of France would say that the word ‘impossible’ was common only amongst fools. The overconfident Napoleon invaded Russia in the winter of 1812. This proved to be a big disaster.</p> <p>2. Overconfidence generally leads people into misadventures, endangering their chances in life. It is wisely said that any achievement is a result of two factors— one’s personal planning and support from the external world. People take into account only their planning, generally ignoring external factors. They become unable to foresee future developments. Hence, the great risk of failure. Then there is the question: how can one manage overconfidence? The formula is very simple. Before taking a decision discuss the matter with other informed people with an objective mind and when it is proved that you are about to go off the path, accept reality and say without delay, “I was wrong.”</p> <p>3. Overconfidence is a flaw characterizing people who lack the virtue of modesty. Modesty makes you a realist; you become a person who is cut down to size. People of this kind become very cautious; before taking an action, they assess the whole situation. They adopt a realistic approach. Overconfident people live within their own thoughts. They know themselves</p>	

	<p>but they are unaware of others. Living inside their own cell they are unable to make use of the experience of others. This kind of habit is highly damaging to all concerned.</p> <p>4. There is a saying that the young man sees the rule and the old man sees the exception. With a slight change, I would like to say that the overconfident person sees the rule and the confident person sees the exception. Overconfident people are always at risk. It is said that taking risk is good but it must be well calculated otherwise it becomes very dangerous.</p> <p>Based on your understanding of the passage, answer <u>ANY FIVE</u> questions from the six given below.</p> <p>(i) When does a person become overconfident?</p> <p>(ii) What proved disastrous for Napoleon Bonaparte?</p> <p>(iii) What are the two factors that bring achievement in life?</p> <p>(iv) Which habit is highly damaging?</p> <p>(v) Why are overconfident people always at risk?</p> <p>(vi) When are the people at a great risk of failure?</p>	<p>5</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p>
<p>2.</p>	<p>Read the passage given below.</p> <p>Technological evolution is a certainty. Cyber-physical systems, Big Data and the Internet of Things (IoT) have been changing the infrastructure of our world. In the 2020s, these phenomena, which are still in their nascency, will rapidly accelerate due to the increasing digitisation of key areas such as health, science, transport, communications and energy.</p> <p>The ubiquity of technology, and its increased ability to connect and communicate, has paved the way for this tipping point. Beneath the surface, we are moving towards an explosion of change.</p> <p>Over 50% of our global population is now online, and the other half is following fast. To be precise, around 726 million people joined the web in the last three years.</p> <p>These new users will change the shape of the internet. Many of them will be lower income. They are choosing smartphones over laptops and tablets and are more likely to use voice commands.</p>	

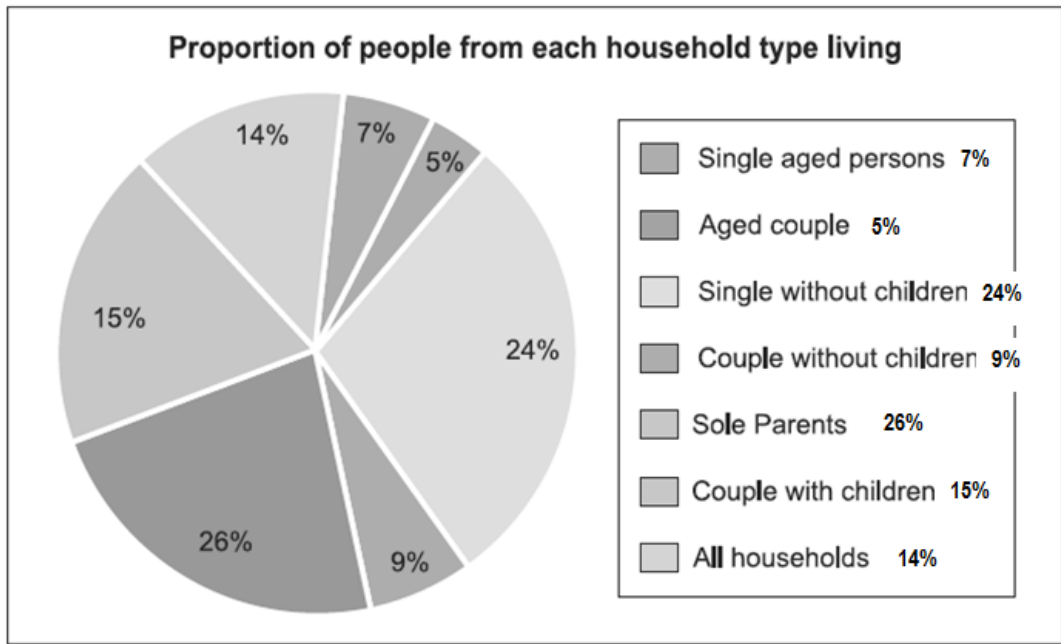

Almost one-third of US homes are 'smart homes', this is set to grow to more than half of all homes by 2024

Geodata and the IoT will create new markets and supply chains. The automation of manufacturing, services and mobility has already begun. Artificial Intelligence (AI) will reach what Gartner terms the 'Plateau of Productivity', in which the technology becomes both mainstream and viable. McKinsey estimates that 70% of companies may adopt at least one AI technology by 2030. It is unlikely they will all use it well, but those that do could manage to take us to a place where man and machine are indistinguishable.

Bioscience has the potential to be transformative in the 2020s. Gene editing (CRISPR) technology will likely soon be able to edit genomes to allow animal organs to be accepted into human bodies – transforming, and perhaps saving, the lives of people currently waiting for organ transplants. Similar technology can also be used to combat inherited diseases and even cancer. Elsewhere, gene therapy experiments are using the body's immune system to fight cancer through re-engineering our cells.

	<p>Technology has inarguably improved science, health, communications, and transport. However, technology has not necessarily corresponded to increased economic productivity. Indeed, many of the most technologically advanced countries have seen productivity stagnate and stall, as discussed in growing inequality and opportunity. In the 2020s many questions around technology will be resolved. The scaffolding is in place. This will be the decade in which AI, Geodata, the IoT, bioscience, and quantum computing are given the opportunity to change our world.
